## 1. FOREWORD

This report summarizes the results of the **SQ-7508.V4** proficiency testing program on the determination of the sound power level of a noise source. This program is carried out under a Bilateral format, according to the A.3.3 classification of the ISO 17043 standard ("Split-sample testing schemes").

**South Quality** conducted the testing program in October 2025 with the aim of assessing the laboratory's ability to competently perform the designated tests.

## 2. ORGANIZATION

Program Coordinator: Lic. Esther Casas  
Assistant Technicians: Berenice Ferrel  
Statistic: Lic. Manuel Tozaki  
Supervision: Eng. Emiliano Medina

## 3. OBJECTIVE

The objective of this proficiency testing program is to determine of the sound power level of a noise source from sound pressure levels measured on a surface enveloping the noise source, using the following standard:

Standard
ISO 3746: 2010

To verify this, batches of electric drills have been selected.

Participants in this program have not been previously informed about the expected values or value ranges of the samples they receive.

## 4. PARTICIPANT

Company: **LABOR S.A.**  
Laboratory: **LABOR S.A.**  
Country: Greece  
Client ID: E474  
Contact person: Ilias Kantas  
Laboratory Manager  
[ilias.kantas@labor.gr](mailto:ilias.kantas@labor.gr)

## 5. HOMOGENEITY

Several batches were prepared identically by the staff at South Quality.

Subsequently, a homogeneity study was conducted with an ISO 17025 accredited laboratory.

The control process followed ISO Guide 35: 2017, clause 7.4.1.2. Stratified random sampling was employed, and samples were chosen using random number generation software.

The results of this test are presented below:

Size of each batch: **30 units**

Tested samples from each batch: **6 units**

DETERMINATION	HOMOGENEITY OF RESULTS IN THE ANALYZED SAMPLES		
	BATCH: LAU3141	BATCH: LAU3142	BATCH: LAU3143
LwA	YES	YES	NO

Samples for this program are taken from selected batch identified as **LAU3142**.

For the indicated batch, the values determined in the homogeneity study are utilized as the assigned values.

The analysis of the test data indicated that the selected samples exhibited sufficient homogeneity for the program. Therefore, the results of participants identified as outliers cannot be attributed to sample variability.

## 6. SAMPLE INFORMATION

The following sample was sent for testing:

Batch:	LAU 3142
Sample ID:	06
Characteristics:	Electric drill 220-240 V - 50/60Hz - 420W - 4200 r/min Trademark: Dong Cheng Model: DJZ03-6

## 7. IMAGES

## 8. ASSIGNED VALUES

BATCH	LwA	
	( dB )	SD
LAU3142	90.3	0.26

## 9. PARTICIPANT RESULTS (SEE APPENDIX B)

CODE	LwA (dB)
LAU3142-06	90.6

## 10. STATISTICS

The results must be treated as quantitative.

According B.3.1.3 of ISO 17043 and the appropriate technique is to compare participant results with the assigned values. The results can be compare using **z score**.

$$z = \frac{x - X}{\hat{\sigma}}$$

$x$  is the participant's result

$X$  is the assigned value

$\hat{\sigma}$  is the standard deviation

The performance evaluation of each sample is carried out with the following criteria:

$|z| \leq 2.0$  indicates “satisfactory” performance and generates no signal;

$2.0 < |z| < 3.0$  indicates “questionable” performance and generates a warning signal;

$|z| \geq 3.0$  indicates “unsatisfactory” performance and generates an action signal;

## 11. EVALUATION OF PERFORMANCE

BATCH	LwA (dB)		z score	PERFORMANCE RESULT
	PARTICIPANT RESULT	ASSIGNED VALUE		
LAU3142	90.6	90.3	1.2	SATISFACTORY

## 12. CONCLUSIONS

The overall performance on this **SQ-7508.V4** program from the participant laboratory **LABOR S.A.**, is **SUFFICIENT** based on expected results.

The criteria used for the evaluation of the overall performance is the following:

- **SUFFICIENT** performance: No unsatisfactory/questionable result was obtained.
- **ALMOST SUFFICIENT** performance: A questionable result was obtained
- **INSUFFICIENT** performance: An unsatisfactory result was obtained.

# APPENDIX A

## INSTRUCTIONS

# INSTRUCTIONS

<b>PROGRAM:</b>	Sound power levels and sound energy levels of noise sources - Survey method using an enveloping measurement surface over a reflecting plane
<b>CODE:</b>	SQ-7508
<b>VERSION:</b>	4
<b>STANDARD:</b>	ISO 3746
<b>COORDINATOR:</b>	Lic. Esther Casas ( <a href="mailto:ecasas@ptsouthquality.com">ecasas@ptsouthquality.com</a> )

## 1 - General

This document serves as a guide for managing the results of the **SQ-7508.V4** program.

## 2 - Standard

**ISO 3746: 2010**

## 3 - Tests involved

TEST
Determination of the sound power level of a noise source from sound pressure levels measured on a surface enveloping the noise source (LwA)

## 4 - Samples

CODE	SAMPLE	QUANTITY
LAU3142-06	Electric drill - 220-240 V - 50/60Hz - 420W - 4200 r/min Trademark: Dong Cheng Model: DJZ03-6	1

## 5 - Notes

- a) Being a bilateral program, there is no deadline for submitting results.
- b) The participant must submit the results using the usual report employed by their laboratory.
- c) The samples are to be handled as routine lab samples, with all testing, documentation, and reporting adhering to ISO 3746.
- d) Samples must be retained until the end of the program, which concludes with the submission of the final report.
- e) To review the results, test images would be appreciated. Images can be attached at the end of this document or sent by email.

## 1. INSTRUMENTATION

Measurement Equipment	Model.	Serial No.
Sound level meter	NTI XL2-TA	A2A-16422-E0
Microphone	NTI M 4260	8466
Calibrator	NTI/Larson Davis	16760

## 2. TECHNICAL DATA

Description of test objects (According to manufacturer data):

Electric Drill  
 Rated Power Input: 420W  
 No-load Speed: 0-4200r/min  
 Max. Drilling Capacity:  
 Steel: 6.5mm  
 Wood: 15mm  
 Net Weight: 1.0kg

## 3. TEST ENVIRONMENT

Description and dimensions: Open Air, Free Field Acoustic Measurements. (See Diagram 1)  
 Environmental correction K2 : 0 dB

## 4. ATMOSPHERIC CONDITIONS

Air temperature	21°C
Barometric pressure	100.0 kPa
Relative humidity	51%
Wind velocity	<4m/sec

## 5. BACKGROUND NOISE

Background sound level	< 62 dB(A)
Background noise correction K1	0 dB

## 6. INSTALLATION AND OPERATING CONDITIONS

The DUT was placed 1m above ground, asphalt covered, in free field environment (no objects or obstacles) on radius >10m. Extreme care was taken for the secure mounting of the DUT in order to suppress any unwanted oscillation. The DUT is supplied using one AC outlet 230V AC / 50Hz.

## 7. REFERENCE BOX CALCULATIONS

$$d_0 = \sqrt{(l_1/2)^2 + (l_2/2)^2 + l_3^2}$$

$d_0$  was set to 1m due to particular test requirements and it is fully compatible with ISO 3746:2010

### 8. MEASUREMENT SURFACE AND MICROPHONE POSITIONS

5 microphone positions were located on the hemispherical measurement surface according to EN IEC 62841-1:2014, with radius  $r = 1$  m, according to the Figure below.

## 9. TEST RESULTS

### 9.1 Test Results

Microphone position	Sound pressure level [dB(A)]	Surface avg. $L'_{pA}$
1	79,5	79.6dB(A)
2	79,7	
3	80,4	
4	79,3	
5	79,0	

Measurement radius  $r = 1\text{m}$  Measuring surface area,  $S = 4\pi\text{m}^2$

Condition	Surface average $L'_{pA}$ [dB]	Correction $K_1$	Correction $K_2$	Surface sound pressure level $L_{pA}$ [dB]	Sound power level $L_{WA}$ [dB]
Normal Load	79.6	0	0	79.6	90.6

$$\overline{L_{pA,1m}} = 10 \lg \left[ \frac{1}{5} \sum_{i=1}^5 10^{0,1 L'_{pA,i}} \right] - K_{1A} - K_{2A}$$

$$L_{WA} = \overline{L_{pA,1m}} + 10 \lg \left( \frac{S}{S_0} \right), \text{ in dB}$$

$$S = 4\pi \text{m}^2$$

$$L_{WA} = \overline{L_{pA,1m}} + 11, \text{ in dB}$$
